3. REQUIREMENTS

3.1 GENERAL SPECIFICATION. Unless otherwise specified herein, all of the requirements of Specification ND-1002210 shall apply as requirements of this specification.

3.2 DESCRIPTION. The assembly shall be used in the Display and Control Electronics Assembly to provide a time delay for the gyro wheels to come up to operating speed before the IMU control power is applied.

3.3 FUNCTIONAL REQUIREMENTS

3.3.1 Electrical Inputs. The assembly shall operate as specified herein when 24-30 vdc is applied.

3.3.2 Time Delay. Upon application of power to the assembly, the time for closing of the external relay contacts shall be 40^{+6}_{-4} seconds. With the power remaining applied for a minimum of 2 minutes, then removed for 5±0.5 seconds and reapplied, the time for closing of the external relay contacts shall be 25±7seconds.

When the preceding steps have been performed, the same procedure shall be repeated twice.

3.4 PERFORMANCE AND PRODUCT CHARACTERISTICS

3.4.1 Service Life

3.4.1.1 Operating Life. The assembly shall meet performance specifications for at least 2000 hours of operation, excluding the supplier's test time of the completed unit.

3.4.1.2 Shelf Life. The assembly shall have a shelf life of at least 3 years, without operation, at ambient room temperature after final acceptance at the supplier's facility, when packaged in accordance with ND1002214.

3.4.2 Reliability. Design objectives require maximum reliability of the assembly during its period of useful life. Every effort shall be made to design and produce assemblies capable of meeting a maximum failure rate of 1.1 per million hours.

PROCUREMENT SPECIFICATION

FOR

40 SECOND TIME DELAY

1. SCOPE

1.1 **PURPOSE.** This specification establishes the requirements for the procurement of the 40 Second Time Delay, Drawing 1015038, hereafter called the assembly.

2. APPLICABLE DOCUMENTS

2.1 **EFFECTIVE ISSUES.** The following documents of the issue in effect on the date of this specification form a part of this specification to the extent specified herein.

SPECIFICATIONS

APOLLO G&N

3. REQUIREMENTS

3.1 GENERAL SPECIFICATION. Unless otherwise specified herein, all of the requirements of Specification ND-1002210 shall apply as requirements of this specification.

3.2 DESCRIPTION. The assembly shall be used in the Display and Control Electronics Assembly to provide a time delay for the gyro wheels to come up to operating speed before the IMU control power is applied.

3.3 FUNCTIONAL REQUIREMENTS

3.3.1 Electrical Inputs. The assembly shall operate as specified herein when 24-30 vdc is applied.

3.3.2 Time Delay. Upon application of power to the assembly, the time for closing of the external relay contacts shall be 40±2 seconds. With the power remaining applied for a minimum of 2 minutes, then removed for 5±0.5 seconds and reapplied, the time for closing of the external relay contacts shall be 25±7 seconds.

When the preceding steps have been performed, the same procedure shall be repeated twice.

3.4 PERFORMANCE AND PRODUCT CHARACTERISTICS

3.4.1 Service Life

3.4.1.1 Operating Life. The assembly shall meet performance specifications for at least 2000 hours of operation, excluding the supplier's test time of the completed unit.

3.4.1.2 Shelf Life. The assembly shall have a shelf life of at least 3 years, without operation, at ambient room temperature after final acceptance at the supplier's facility, when packaged in accordance with ND1002214.

3.4.2 Reliability. Design objectives require maximum reliability of the assembly during its period of useful life. Every effort shall be made to design and produce assemblies capable of meeting a maximum failure rate of 1.1 per million hours.
